

Build with the Best.

# ADVANTAGES

## of building with Astro Buildings

All buildings are custom designed and may use any type of roofing, siding, or interior finish

**Our mission** is to deliver customized buildings that are of the best materials and design for the highest quality and value.

- We custom-design your building to fit **your needs**, and **your budget**
- Unlimited options – we accommodate your **special siding, roofing, foundation and finish** requests
- An **efficiently-engineered** design provides you **superior strength** with optimized materials so you get the best performance and value
- **Detailed plans** ensure your building is erected correctly and efficiently
- We make sure you are satisfied with a **5-Year Workmanship warranty**
- **Lifetime** steel film integrity and **30-year limited warranty** ensure you long-term beauty
- **Color-matched steel screws** and exceptional trim work **quality**
- **Experienced and insured** crews & sub-crews
- **Crushed rock backfill** for superior uplift resistance and drainage around soil-embedded columns for building longevity
- **We bid at true wall height interior clearance** instead of just exterior “wall height” so **your ceiling doesn’t end up lower than you expected** after the floor is poured
- We provide crew **sanitary facilities and debris removal** included in your estimate
- **Superior materials and workmanship** for a **top-quality building** that will last
- With more than **45 years** in business, **we stand behind our buildings**

Optional lifetime warrantied Perma-Column pre-cast concrete piers

Other concrete foundation options available

## Protect Your Investments with Astro Buildings

# ASTRO BUILDINGS

Build with the Best.

- 50-year warrantied finger-jointed glue-laminated columns provide you with better stiffness and shear strength than solid-sawn timbers or nail-laminated columns and are pressure treated to high standards
- Lifetime warrantied Perma-Column pre-cast concrete piers and other concrete foundation options available
- Corner bracing and continuous lateral truss bracing
- High-strength pre-cast concrete footings
- "Full-hard" steel with a high tensile strength of 82,000 pounds per square inch (psi), which is harder than thicker, softer grades of steel.
- Steel Ribs every 9" o.c. instead of 12" - using more and better fasteners to ensure your siding and roofing are wind-resistant
- Steel uplift anchors are attached to the bottom of each glue-laminated column and backfilled with rock for superior uplift protection and column longevity
- 1650 MSR machine-stress framing lumber – stronger and better than #1 lumber so your building remains strong and true
- Large top and bottom chord trusses engineered for just one truss at each post-frame, giving you a genuine post-frame 3-D diaphragm design
- Joist hangers nestle each roof purlin on edge flush with the top of the truss, instead of set atop the truss on edge (which may cause purlin slip) or flat (which may cause sag)
- Panels up to 50% stronger than some 26-gauge – 56,000/psi steel
- Steel panels feature 5-layer Valspar Enduracote Paint System (Galvanized, zinc pre-treatment, sealer coat, primer coat and top coat)

*Astro Buildings are uniquely engineered to ensure the highest quality, efficiency and durability.*
